- Front image surface fitting – fit the frame to the wall then install the image surface
- vBlack magnetic covers – front fitting magnetic black velvet covers
- Size custom made to order

# Frontier

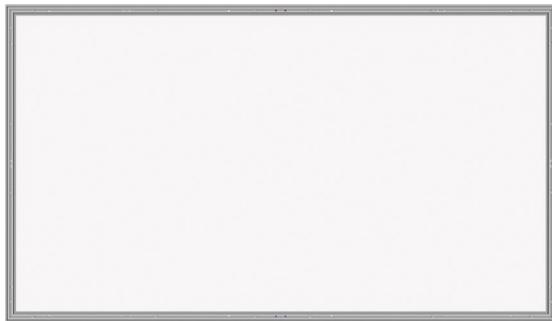

[DT-FRNT]

On wall projector screen with fixed velvet surround

The Frontier supports the simple install mounting system where all mounting points are located through the frame itself. The first point locates the install height of the screen whilst the second sets the rotation angle of the screen. Simple, fast and reliable.

DT Screens image surfaces are loaded from the front side of the screen after the screen frame has been securely mounted to the wall. This is the safest and fastest way to install an image surface and results in the exceptional flatness our mounted image surfaces deliver.

The veBlack magnetic front frame is another DT innovation which makes installation easier and the end finish better. The 69mm wide outside frame pieces are covered in our veBlack velvet finish and simply clip on to magnets installed around the frame perimeter for a perfect finish in the shortest time.

## TECHNICAL SPECIFICATION:

- Overall size =  
Image Width + 134mm  
Image Height + 134mm  
Depth = 36mm
- Available with our full range of Image Surfaces
